CC&M Protects Customers with the Best First Line of Defense Against Cyber Attacks

Leading MTSP Implements Multi-Factor Authentication, which 72% of Organizations Lack

GREENWOOD & GREENVILLE
SOUTH CAROLINA – May 23, 2025 - CC&M, a leading managed technology services provider (MTSP), is reinforcing the critical importance of Multi-Factor Authentication (MFA) to protect organizations from cyberthreats, employee error and network vulnerabilities. MFA is still the single most cost-effective solution to reduce network risk. In fact, according to a 2023 Microsoft study, 99.9% of compromised Office 365 accounts lacked MFA, whereas only 0.1% of the companies with MFA-enabled were negatively affected by a breach. The exponential returns for minimal security effort highlights MFA as an obvious cybersecurity solution for organizations. CC&M is protecting businesses, institutions and non-profits alike by implementing this incredibly simple extra security step that can make a real impact.

MFA requires users to verify their identity with a second factor—like a code sent to their phone, a fingerprint scan, or a face ID—before logging in. This extra step makes it exponentially harder for hackers to break into accounts, even if they have a stolen password. Despite its effectiveness, most organizations still don't require it. Why?

- **Resistance to Change** – Organizations worry about adding an extra step to logins, fearing employee complaints.

- **Misplaced Confidence** – Many assume their passwords are already strong enough, despite the rise of sophisticated phishing attacks and credential leaks.
- **IT Providers Not Pushing It** – Most IT providers hesitate to enforce MFA.

"If you knew that putting a lock on your front door would prevent 99.99% of break-ins, would you voluntarily leave it unlocked? How often do you wear a seatbelt even though it's only 45-60% effective?," said Rocky Dunkman, Owner/CEO at CC&M. "The same logic applies to MFA. Yet, many businesses still don't enforce it, leaving their networks wide open to attacks. Even though people don't like added steps, this offers such a strong benefit to your organization that we believe your IT provider or IT staff are morally obligated to demand you enable 2-Step Verification. If you don't have MFA, you should reassess what caliber of IT support you actually have safeguarding your business."

While some users find traditional MFA methods slightly inconvenient, the technology is evolving to become even simpler. In the next several years, the user experience (UX) will improve through features like; biometric authentication – face scans and fingerprints replacing text message codes, touchscreen-based approvals – instead of typing a code, users will tap a button on their device, or password less logins. All of these will make it even simpler to prevent cyber-attacks.

"The good news is that MFA will only get easier and more seamless in

the future," added Dunkman. "But until then, businesses still need to take action, now."

ABOUT Computer Consultants & Merchants Inc (CC&M)

In 1992, Computer Consultants & Merchants was founded to bring technology services and equipment to businesses in the Orlando, Florida area. In 2001 they expanded their footprint by adding offices in Greenwood and later Greenville covering the Upstate of South Carolina. CC&M streamlined the way companies do business, and the Company became successful for its expertise and service. Providing consulting, business acumen, and of course maintenance services that have always included parts and labor for clients.

Computer Consultants has evolved to meet the changing needs of businesses, providing clients with exemplary technology consultation, Business phone Systems, Access Control with Video surveillance, Cyber Security, Managed Print, integration and Managed services are still the core of everything we provide.

Thirty years later CC&M is still doing what it does best, providing its clients with advanced technology solutions and stellar service!
